- Partial payments supported 
 - Final unlock based on total paid $\geq$ required
 - POC controls entry
-

RESOURCE VAULT

Table

Columns:

- File name
 - Type
 - Uploaded date
 - Download button
-

Download Logic

If full payment NOT complete:

- Button disabled
- Tooltip:

"Available after final payment"

CREDENTIAL VAULT

Credential Card

Fields:

- Service name
- Username
- Masked password

Buttons:

-  Show Password
-  Copy Password

Every interaction → audit log.

Client Controls

Client may request:

- Delete credentials
- Delete deliverables
- Delete full project

UI must clearly separate:

 Archive
 Delete (danger zone)

ACTION REQUIRED PANEL

Persistent widget.

Triggers:

- Approval pending > variable days (default 2)
- Client inactive > variable days (default 2)
- POC inactive > variable days (default 1)
- Payment pending

Each item clickable → deep link.

REQUIREMENT SHEET HANDLING (Your earlier uncertainty resolved)

Recommended Implementation

Use:

Requirement Snapshot + Addendum Log

Initial Requirement

Locked snapshot.

Minor Change

Addendum entry appended.

Major Change

Triggers:

- Scope revision
- New quotation flow

This avoids messy version trees.

SYSTEM VARIABLES (Admin Configurable)

Must be editable in future settings panel:

- Default advance %
 - Client inactivity days
 - POC inactivity days
 - Health thresholds
 - Payment unlock rule
-

WHAT SNEHA CAN BUILD IMMEDIATELY

You now have:

- Page inventory
- Component lists
- Field definitions
- Behavior rules
- Permission expectations
- Edge case handling

This is production-grade direction
